

## Harnser Wins Accolade At Top Safety Awards Event

Just twelve months after its launch, the innovative new window hoist "Eazi Lifter" from **Harnser Systems Ltd** has been distinguished at the annual Health & Safety Awards in London.

The Eazi Lifter, available on contract hire or outright purchase allows frames or fully glazed windows to be lifted to upper floor openings safely and cost-effectively, was one of a small number of products to be short-listed in the 'best safety product' category.

The awards, in association with the Health & Safety Executive (HSE), reward innovation, professionalism and excellence in all areas of construction safety. As finalists, the Harnser team was at the glittering ceremony at London's Park Lane Hotel to receive its accolade.

'For a small company in a specialist field, to be short-listed alone is a major achievement,' says Eazi Lifter inventor Jeff Crowder, 'and to take the runners-up spot against stiff competition is the icing on the cake.'

The Eazi Lifter is set to revolutionise the way frames are put into place on new build and refurb installation projects. Easily portable, and quick and simple to use, the low-cost crane offers not only safety benefits but also significant cost-savings as a result of the speed with which windows can be lifted, without the need for costly towers, scaffolding or cherry pickers. Commenting on Eazi Lifter's success, Stephen Williams, the HSE's chief inspector of construction, said: 'Work at Height and manual handling issues are critical to the safety of site personnel. It is good to see innovative products like the Eazi Lifter hoist being developed and brought to market to provide practical and effective improvements.'

To meet the growing demand for the revolutionary new crane, Harnser Systems Ltd, trading as Harnser solutions has recently moved to a new office and workshop in the prestigious Hethel Engineering Centre.
